Home, before visual styling

Where is my money, and which account needs attention? A low-fidelity mobile sketch grounded in P01.05 and the product acceptance examples.

01 · Read recorded money first

SEK, EUR and USD remain separate. Savings balances, when present, are already part of their currency total. No conversion, available-to-spend claim or forecast interest is included.

02 · Plan for a selected date

30 October 2026 is an explicit example selection, not a default policy. The date control opens a date picker; returning keeps that selection. Detailed date boundaries remain P09.01 work.

03 · Keep the source account visible

EX-08: A = SEK 300; B = SEK 2,000; one SEK 800 pending payment from A. A's planning difference is −SEK 500. B's balance does not remove A's shortfall. The main sketch adds independent EUR/USD fixtures.

04 · Review before recording a payment

A payment row opens occurrence details. Review is read-only. Confirmation happens there, only after the user paid. No due date, tap on Home or planning difference posts money.

05 · Preserve accountless paths

The EUR 20 example remains "No account assigned" and is outside every account's planning difference. Open its details to assign an account or leave it unassigned. First use allows income/expense recording without an account.

06 · Keep navigation shallow

Four provisional tabs: Home, Accounts, Transactions, Insights. "View recurrence" and "View savings" are explicit Home links. Settings includes session controls. Detail returns preserve context.

07 · Show the whole scroll, not a giant phone

The populated Home is a full scroll-content specimen at 390 px width. In implementation, system chrome and tabs stay outside the scrolling body. The header + opens the activity menu shown below.

08 · States are data, not decoration

First use means no accounts or activity. Loading/error never display fake zero balances. Existing accountless records still appear via Transactions/Insights. No-pending results keep balances and offer a date change.

Record activity

- **Record income**
- **Record expense**
- **Record transfer**
- **Cancel**

Income/expense → F02. Transfer → F04; with fewer than two suitable accounts, offer account creation or cancellation. Cancel closes without changes.

Local section state · no pending payments

No pending payments through 30 October 2026.
Choose another date or add a recurring expense.

EX-08 walkthrough: record an actual SEK 500 transfer B → A; A becomes 800, B becomes 1,500, planning difference becomes 0. Confirm the actual SEK 800 payment once: A becomes 0; spending becomes 800; the occurrence leaves pending. Transfers never count as spending.

Sketch only. No live data or working interactions. P01.07–P01.10 remain separate tasks; grayscale and Inter are temporary wireframe styling.
