Expense · Validation

Choose an account in SEK

The selected account uses EUR. Choose a SEK account or leave this expense unassigned.

Choose account

Leave unassigned

Transfer · Unknown result

We could not confirm this transfer

Its result is still unknown. Do not record another transfer for the same movement.

Validation preserves entered fields and changes no records. Unknown results must resolve the original operation or retry under the same idempotency contract; exact recovery controls remain API/client work. Loading uses the Home loading pattern, adapted to the destination, without fabricated zero values.

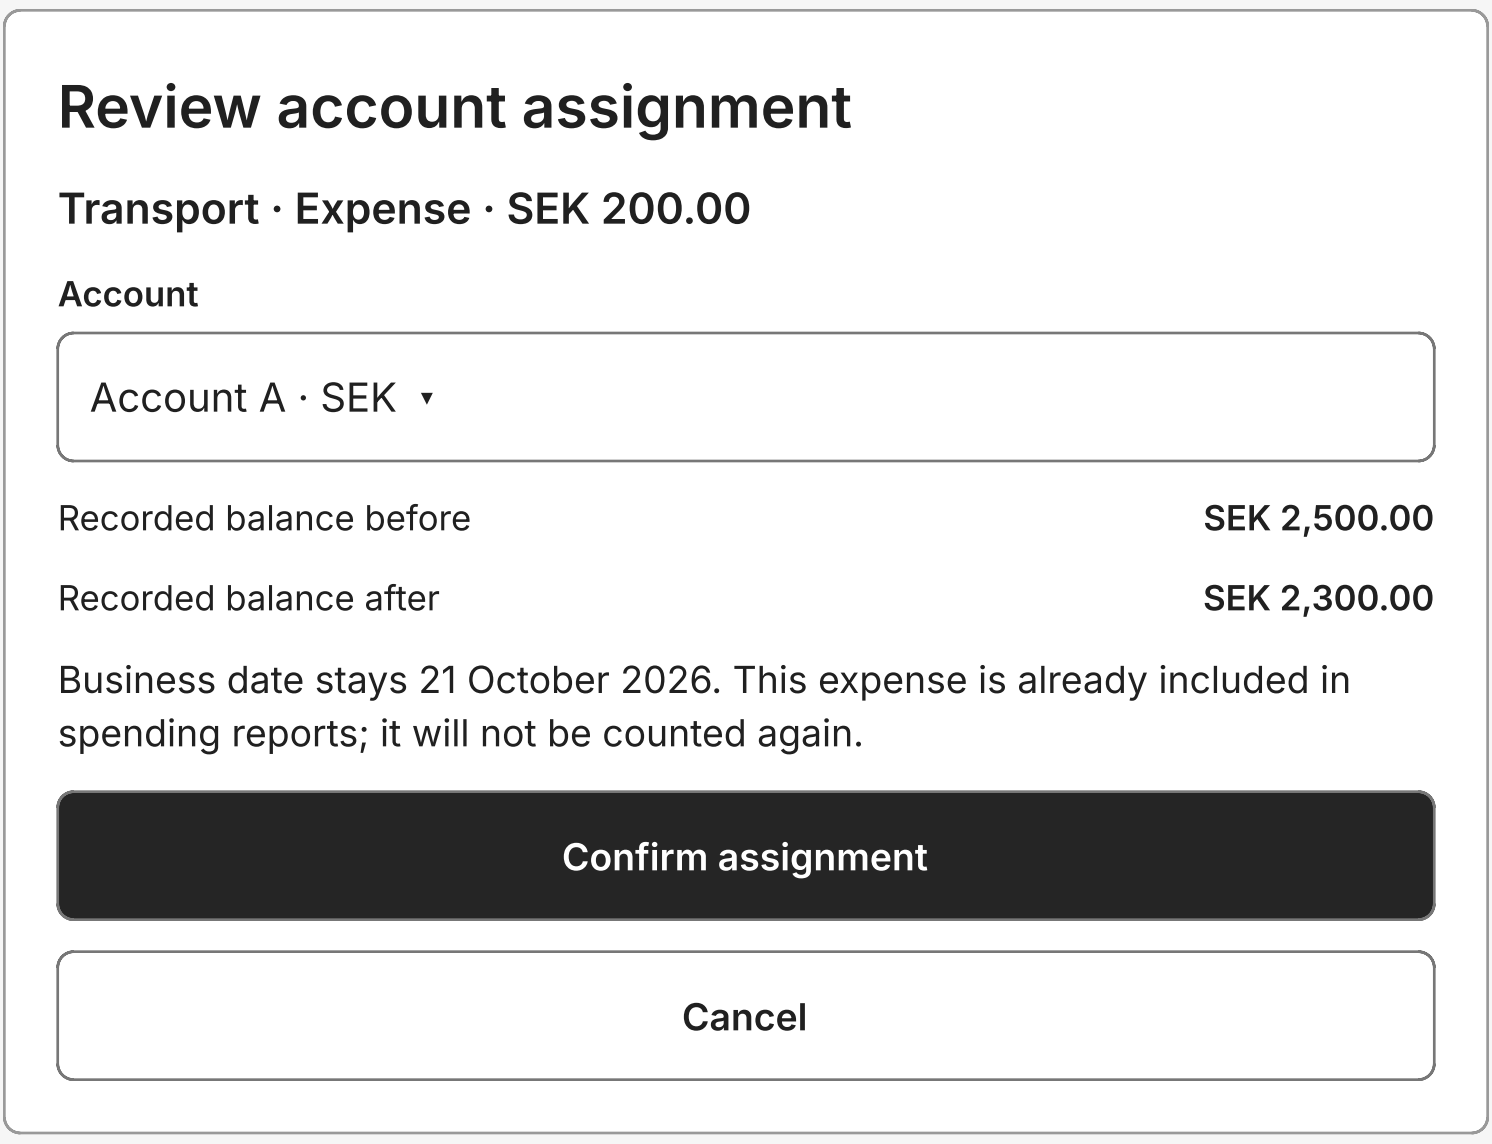

Unsaved changes · shared confirmation

Follow one record through its changes

One coherent fixture

Opening balances: A SEK 1,000; B SEK 500; Savings S SEK 1,000; Euro account EUR 100; Dollar account USD 100. Then record SEK 2,000 income, SEK 300 groceries, a SEK 200 → EUR 18 transfer, and an unassigned SEK 200 expense. Current totals: SEK 4,000 / EUR 118 / USD 100.

Read the samples as stages

Record-expense and record-transfer forms depict the existing sample operations before confirmation, not additional operations to submit. The assignment preview is a later, unsaved change. The Home EX-08 sketch is an independent fixture, not a synchronized live screen.

Review, then confirm

Account creation, income/expense and transfer forms lead to review before a final confirmation. The review repeats dates, currencies, accounts and recorded effects. Cancel changes nothing; success returns to the originating context.

Select eligible accounts

Income can use a normal account or no account. Ordinary income cannot be assigned to savings, including edits. Savings contributions use transfers; actual credited interest has its separate P01.08 flow. Assigned income/expense currency must match its account.

One transfer, two amounts

From and To must be distinct owned accounts. Same-currency amounts match. Across currencies, sent and received amounts are required; the reference rate is optional and cannot silently replace them. History shows one operation; its detail shows both movements.

Account and transaction boundaries

Account activity includes opening movements; Transactions lists business operations. Openings and transfers are excluded from income/spending. Pending payments remain separate. Savings opens the same underlying account, not a second balance store.

Filter and return context

The shown October range is illustrative, not a default. Account choices include All, a specific account, and No account assigned. Filters are provisional controls; cancel keeps the applied filters. Details and successful edits return to the original list context.

Correction and recovery

Edit the existing record and preserve its audit history. Reassignment reverses the old account effect and applies the new one together. Do not expose deletion of posted movements as routine cleanup. No new financial operation is created when a result is uncertain.

Low-fidelity sketches only. Navigation and form presentation are provisional. P01.08 owns dedicated Recurrence, Savings and Insights screens; P01.09–P01.10 own visual styling and the wider state/component system.
