# One language for every state.

P01.09 primitives stay unchanged. Semantic names express purpose; controls consume roles rather than choosing an arbitrary shade.

## Light surface

- Canvas · #FFFFFF
- Surface · #FFFFFF
- Muted surface · #E9F0FB
- Primary text · #0B1E3D
- Secondary text · #18448B
- Control boundary · #1F57B2
- Action fill · #2466D1
- Action label · #FFFFFF
- Underlined link · #1F57B2
- Focus indicator · #18448B

Subtle separators are decorative. Essential control boundaries use the border token.

## Dark surface

- Canvas · #040B16
- Surface · #0B1E3D
- Muted surface · #143770
- Primary text · #E9F0FB
- Secondary text · #9BBBED
- Control boundary · #74A0E7
- Action fill · #9BBBED
- Action label · #040B16
- Underlined link · #9BBBED
- Focus indicator · #C2D5F4

Subtle separators are decorative. Essential control boundaries use the border token.

Information

Recorded

Needs attention

Could not record

Feedback colors describe process status, not whether income or spending is good or bad. Every state includes text and an icon. Planned, estimated and recorded remain explicit labels.

## Typography

Bodoni Moda 500: display 44 / heading 32.
IBM Plex Mono: body 16 / metadata 14.
Compact navigation 13; allow a destination list when labels no longer fit.
Body leading 1.5; heading leading 1.2.

## Space and shape

Spacing: 4 · 8 · 12 · 16 · 20 · 24 · 32 · 48.
Control / card radii: 10 / 12.
Control baseline 56; target minimum 48.
Default border 1; focus outline 2 with a 2-unit gap.

## Interaction and motion

Default → hover → pressed → focused.
Disabled includes a reason; no opacity trick.
Transitions 120 / 180 ms; zero optional movement under reduced motion.
No flashing, automatic posting or color-only status.

Reference units are design pixels; native implementations must use scalable platform units. Solid, opaque color pairings are audited. Light and dark roles are separate named variables; feedback notices retain their explicit high-contrast surface in either mode.

Native theme behavior, focus traversal, reduced-motion behavior and screen-reader announcements are implementation requirements, not verified functionality of this static canvas.

# Consistent by construction.

Shared components expose visual states, not new financial behavior. Existing P01.09 actions and navigation remain reusable sources.

## 02 / Persistent labels and recoverable validation

Default / filled

**Amount**

SEK 300.00

Enter the amount in SEK.

Keyboard focus

**Amount**

SEK 300.00

Enter the amount in SEK.

Error / entered value preserved

**Amount**

SEK 12..50

Error: use one decimal separator.

Disabled / reason provided

**Amount**

SEK 300.00

Recording in progress. Editing is unavailable.

Labels do not disappear on entry. Invalid input remains visible and changes no records. Native fields expose labels, errors, required/disabled state and focus order to assistive technology.

Selector / optional account

**Account (optional)**

No account assigned

Choose an account in the same currency.

Currency mismatch / no partial effects

**Account (optional)**

Euro account · EUR

Error: choose an account in SEK or leave this expense unassigned.

Date trigger / never automatic posting

**Planning through**

30 October 2026

Changing this date does not record a payment.

## 03 / Selection is explicit, never color-only

Checkbox / selected and clear

☑ Include unassigned

☐ Include unassigned

Radio / one currency

◉ SEK

○ EUR

Switch / labeled On and Off

Show planned On

Show planned Off

Focus wraps the entire target with the same 2 + 2 outline. Pressed/hover use the selection surface; disabled controls do not activate and retain a visible reason. Checkboxes/radios expose checked state; switches expose on/off state. These are native implementation rules.

## 04 / Financial primitives and process feedback

Currency + full signed value

Recorded balance

Recorded balance

SEK 2,500.00

Notice / icon + title + explanation

**Planned, not posted**

This amount is excluded from recorded balances.

**Payment recorded**

The occurrence is no longer pending.

**Result not confirmed**

Resolve the original operation before trying again.

**Records unavailable**

A failed read is not a zero balance.

Reuse P01.09 navigation

Home | Accounts | Transactions | Insights

At narrow widths or large text, use a full-width destination list instead of squeezing four labels.

Loading / no fabricated number

Loading records…

Unsubmitted changes / safe default

### Discard changes?

Your changes have not been recorded.

Keep editing

Discard changes

Static specimens show appearance, copy and intended behavior. Focus, disabled semantics, announcements, input keyboards and dialogs still require native implementation and testing. Never silently suppress an error or resubmit an uncertain operation.

# Different outcomes. Honest interfaces.

Each panel is independent. Loading is not zero. Planned is not posted. Unknown is not failure or success. Reuse the original recovery semantics; never invent a financial outcome.

### 01 / Loading

Loading records…

Design rule: expose busy state; no fabricated balances. Reduced motion may keep this completely static.

### 02 / No accounts

**No accounts yet**

Add an account to see its recorded balance. You can still record income or expenses without an account.

+ Add account

Record without an account ↗

### 03 / Filtered no results

**No transactions match**

Your records are still there. Change the date, currency, account, type or category.

Edit filters

Reset filters

### 04 / Read failure

**Records could not be loaded**

Current data is unavailable. Check your connection and try again.

Try again

Design rule: retry reads only; do not display SEK 0.00 or promise offline synchronization.

### 05 / Validation

Account (optional)

Euro account · EUR

Error: choose an account in SEK or leave this expense unassigned.

Choose account

Leave unassigned

Design rule: keep entered values. No record or account movement changes.

### 06 / Submission in progress

**Recording…**

Wait while the original request is resolved.

Recording…

Design rule: the control is busy and unavailable. Do not issue a second operation. A timeout leads to unknown, not automatic success.

### 07 / Confirmed write

**Payment recorded**

SEK 800.00 · Account A
30 October 2026
This occurrence is no longer pending.

↗ View expense

Design rule: only a confirmed result earns success. Open the existing expense rather than offer another confirmation.

### 08 / Unknown write outcome

**Result not confirmed**

We could not confirm whether this operation was recorded. Resolve the original operation before trying again.

Do not create another payment, transfer or receipt for the same event.

Design rule: exact status/retry controls follow the API/client idempotency contract. No speculative retry button is offered here.

### 09 / Session expired

**Sign in to continue**

Your session expired. Sign in before accessing your records.

Sign in

Design rule: mask sensitive data. Resolve uncertain submitted work after authentication; never silently resubmit it as a new operation. Draft persistence is not promised.

### 10 / Unsaved changes

**Discard changes?**

Your changes have not been recorded.

Keep editing

Discard changes

Design rule: safe initial focus is Keep editing. Cancel/back changes nothing. This dialog never deletes posted movements.

### 11 / Confirmed empty period

**No income or spending**

Income SEK 0.00
Spending SEK 0.00
Net flow SEK 0.00

Account balances may still be nonzero. Percentages are omitted when total spending is zero.

Change period

### 12 / Planned and estimated

Planned · Not posted

**Estimated interest**

SEK 5.00 · November 2026
Not yet credited. Excluded from recorded balances.

Design rule: reaching a date does not confirm a payment or interest receipt. Record only an actual event.

### 13 / Overdue occurrence

**Overdue · Not confirmed**

SEK 800.00 · Due 20 October 2026
The occurrence remains planned.

↗ Review payment

Design rule: this independent example is not an extra ledger payment. Review is not a bank payment or automatic posting.

### 14 / Unsupported estimate

**No estimate available**

The rate basis is unidentified or unsupported. You can still track the account and record actual interest received.

Review terms

### 15 / Unavailable access

**This record is unavailable**

Return to your records or sign in with the appropriate account.

← Back to records

Design rule: do not reveal whether another person's record exists. Authorization remains enforced by the server.

Other empty states reuse 02 with domain-specific copy: no transactions, no recurring rules, no savings accounts, no pending matches through a selected date. Existing P01.07/P01.08 specimens remain the copy references. A read failure never replaces existing data with invented zeros.

# More room, not smaller type.

320-unit specimens compare 100% and 200% text. Heights grow, labels wrap and critical values remain visible. They are static design probes, not proof of native Dynamic Type or a complete responsive implementation.

320 wide / 100% text

## Review

Record this payment after you have paid it.

Planned payment

DARK / FOCUSED CONTROL

### Record, with clarity.

+ Record activity

Text, boundaries and focus use dark semantic roles. Notices keep their own opaque feedback surfaces.

IMPLEMENTATION CHECKLIST

- Grow controls with text; minimum targets are not fixed heights.
- Preserve full amounts, signs, currencies, dates and error messages. Never shrink type or silently ellipsize a critical value.
- Use layout alternatives, not clipped navigation labels; test actual maximum supported amounts and localized formats.
- Keep focus visible, dialogs escapable and status announcements appropriate.
- Respect platform text settings, contrast settings and reduced motion.

The initial design system is defined here. Native viewport behavior, screen readers, keyboard traversal, reduced motion and complete light/dark implementation remain work for the actual clients; no production code is changed.
